

Chandra Sekhar

Seeking Senior Java Full Stack Developer Role | Spring Boot • React.js • Microservices • AWS • AI-Assisted Development

Hyderabad, India | pedagadisekhar@gmail.com | +91-80740464422

PROFESSIONAL SUMMARY

Results-driven **Java Full Stack Developer** with **3.5 years** of experience delivering scalable enterprise applications using **Java**, **Spring Boot**, **Microservices**, and **React.js**. Proven track record of measurable impact — 50% faster API response via Redis caching, 35% bundle reduction through Angular-to-React migration, and 99.7% system uptime via APM-driven tuning. Early adopter of **AI-assisted development** using Cursor, GitHub Copilot, and Claude; built **MCP-based automation** pipelines for Jira acceptance criteria generation and automated GitHub PR review comments, accelerating delivery velocity and code review throughput. Experienced with AWS, Docker, CI/CD, and modern frontend tooling (Redux, TanStack, Vite).

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux, Zustand, Context API, React Query, Axios, Zod, TanStack Form, TanStack Virtual, Recharts, Lodash, Day.js

Backend: Java, Spring Boot, Spring MVC, Spring Security, Spring JPA/Hibernate, REST APIs, Microservices, JWT, Bcrypt, Winston, Cookie-parser

Databases: MySQL, MS SQL Server — Query Optimization, Indexing, Schema Design, Redis (Caching)

AI & Automation: Cursor IDE, GitHub Copilot, Claude (Anthropic), OpenAI Codex — AI-assisted coding; MCP (Model Context Protocol) — Jira automation, GitHub PR automation

Cloud & DevOps: AWS (S3, EC2, ECR, ECS, Amplify), Docker, Jenkins, CircleCI, Git, GitHub

Build Tools: Vite, Webpack

Monitoring & Analytics: Grafana, AppDynamics, Mixpanel, Honeycomb, OpenSearch, LaunchDarkly

Project Delivery: Agile/Scrum, Jira, sprint planning, backlog grooming, cross-functional collaboration

WORK EXPERIENCE

Software Development Engineer II — Java Full Stack

Apr 2025 – Present

ABC Fitness Solutions, Hyderabad

- **Pioneered MCP (Model Context Protocol) automation for the engineering team — built an automated Jira acceptance criteria generator using Claude MCP, reducing story-writing effort by 70% and ensuring consistent, testable AC across all sprint tickets with zero manual intervention.**
- **Developed a GitHub PR automated review bot using MCP and Claude AI, auto-generating inline code review comments for pull requests — cutting average human PR review time by 50% and catching 30% more code-style and logic issues before merge.**
- **Adopted AI-assisted development using Cursor IDE and GitHub Copilot for boilerplate generation, unit test scaffolding, and code refactoring, improving individual feature delivery speed by 40% and reducing time-to-first-commit on new tasks by 60%.**
- Architected and delivered batch-wise bulk deletion for large-scale event data (1,000+ records/batch) across Spring Boot and React.js, cutting deletion time by **65%** and eliminating database timeout errors for enterprise clients.
- Implemented **Redis caching** for high-frequency event queries, achieving a **50% reduction** in API response time and cutting DB load by 40% at peak traffic.
- Executed **CMOD-to-Blob Storage migration** with zero data loss, improving storage scalability by 60%; monitored real-time progress via Grafana, AppDynamics, and OpenSearch.
- Directed **Angular-to-React.js frontend migration**, reducing bundle size by **35%**, improving page load time from 3.4s to **1.5s**, and increasing component reuse across 8+ modules.
- Engineered **infinite scrolling, server-side pagination, and dynamic data tables** (TanStack Virtual, React Query) for 100,000+ record datasets with sub-200ms render times.

- Integrated **LaunchDarkly feature flagging** across 6 releases, enabling zero-downtime deployments and reducing rollback time to **under 5 minutes**.
- Tracked system health via **AppDynamics, Grafana, Mixpanel, and Honeycomb**; resolved 3 critical bottlenecks, lifting uptime from 97.4% to **99.7%** and cutting P95 latency by 38%.
- ★ **Achievement: MCP-based Jira + PR automation adopted team-wide, saving 6+ engineering hours per sprint and recognized as an internal innovation initiative.**
- ★ **Achievement: Angular-to-React migration delivered 2 weeks early — enabled early client launch and received formal recognition from engineering leadership.**

Software Engineer — Full Stack (Java & React)

Jan 2023 – Apr 2025

iConcept Software Services Pvt Ltd, Hyderabad

- Owned **full software development lifecycle** for 5+ enterprise applications — architecture through deployment — serving 2,000+ active users with high-availability solutions.
- Designed and implemented **Role-Based Access Control (RBAC)** with TM/RM/ZM hierarchy, eliminating unauthorized access incidents and reducing approval cycle time by **45%**.
- Developed and optimized **RESTful APIs** using Java Spring Boot, handling 10,000+ daily transactions with a **30% improvement** in response time via query optimization and connection-pool tuning.
- Constructed **dynamic React.js UIs** with a reusable component library, accelerating feature delivery by **50%** across 3 parallel product lines and reducing UI bugs by 35%.
- Automated 12 critical business workflows via **C# Windows services and task schedulers**, saving **18 hours/week** and eliminating human error from recurring operational processes.
- Integrated **email, SMS, Excel export, and PDF generation** pipelines, automating 8 reporting workflows and cutting report turnaround from 2 days to **real-time delivery**.
- Resolved 40+ **cross-browser compatibility** issues (Chrome, Firefox, Safari, Edge), reducing production UI bug reports by **40%**.
- Refactored codebase and applied **caching strategies**, reducing average page load time by **28%** and improving Lighthouse performance score from 62 to **84**.
- Partnered with support teams on production incident resolution, maintaining **99%+ SLA compliance** with MTTR under 2 hours.
- ★ **Achievement: RBAC module delivered 3 weeks early — unblocked compliance audit, earned formal CTO appreciation.**
- ★ **Achievement: Reporting automation reduced client costs by ~20%, key factor in INR 40L contract renewal.**

PROJECTS

Jira AC & GitHub PR Automation — MCP Pipeline

Stack: MCP (Model Context Protocol), Claude AI, Jira API, GitHub API, Node.js | **Role:** Solo Developer

Built two MCP-powered automation tools: (1) **Jira Acceptance Criteria Generator** — reads Jira ticket context via MCP and auto-drafts structured, testable AC using Claude AI, saving 70% story-writing effort; (2) **GitHub PR Review Bot** — triggers on PR open events, analyzes diff via MCP, and posts inline AI-generated review comments, cutting review time by 50%.

TeensFashion — Full Stack E-Commerce Platform

Stack: React.js, Node.js, Spring Boot, MS SQL Server | **Role:** Full Stack Developer

End-to-end shopping platform with product catalog, cart, order processing, and admin RBAC dashboard. Reduced manual order handling by **80%** and cut processing time from 4 hours to **under 10 minutes**.

PRNews — Real-Time News Aggregation Platform

Stack: React.js, Node.js, MS SQL Server | **Role:** Full Stack Developer

Real-time news platform with optimized API caching and sub-second refresh. Handled **500+ concurrent users** with 99.2% uptime and API response times under **180ms** in load testing.

EDUCATION

Bachelor of Technology — Electrical & Electronics Engineering

2016 – 2019

JNTU-K (VITAM) | Aggregate: 72%

CERTIFICATIONS

Certification	Issuer	Year
MERN Stack Development	10x Academy	2022
Microservices Architecture in Java	Udemy (Oracle curriculum)	2023
